

**To whomsoever it may concern**

We acknowledge and appreciate that the course structure of **PG Diploma in Embedded System Design – ED500** conducted by **NIELIT Calicut** is highly useful in preparing the fresh graduates towards development of expertise and skills in the niche areas of embedded systems, specifically in the portfolios of Consumer Electronics, Automotive, Industrial Automation. This course structure also covers emerging technologies like Internet of Things (IoT) which have huge potential in the near future. It is highly commendable that the course structure is built from strong basic skills of programming in C, Data structures, Micro Controllers, Operating Systems, Linux etc.

We strongly endorse that the current course structure and contents facilitates the goal of creating an Embedded Systems Engineer from a fresh graduate. Such a course really bridges the gap between fresh engineering graduates and companies like Inntot Technologies that focus on Embedded Systems based Technologies.
